Carrier Profile

Project 1: Exact Software (Tax Software)
Client: Exact Software
Duration: [2021] – [Present]

Description: Exact Software is a tax management application designed to streamline the filing of tax returns, managing TDS, and other related tax services.

Role: Front-End Developer

Responsibilities:

- Developed and maintained the tax software using Angular and Nx.
- Implemented unit testing with Karma and utilized Git for version control.
- Leveraged GitHub Copilot to enhance code efficiency and accuracy.
- Followed Agile methodologies for project management and development.
- Collaborated with the backend team working on .NET to integrate APIs and ensure seamless functionality.
- Utilized Azure DevOps for CI/CD pipelines and project management.
- Ensured the application is responsive and optimized for various devices.

Technologies Used: Angular, Nx, JavaScript, Karma, Git, GitHub Copilot, Agile, HTML5, CSS3, .NET (backend), Azure DevOps

---

Project 2: Bank Admin (Web Application)
Client: Snapcheck
Duration: July 2019 – June 2021

Description: Admin is a comprehensive tool for managing users, payments, checks, banks, and other interfaces.

Role: Full Stack Developer

Responsibilities:

- Developed and secured the application using Passport authentication with Node.js.
- Worked independently to ensure the application is both functional and visually appealing.
- Optimized application performance for speed.
- Improved MongoDB query performance for faster data retrieval.
- Utilized various Node.js libraries to enhance the application's look and feel and to save development time.
- Implemented advanced query builders, pagination, data tables, graphs, Passport authentication, date range selectors, and JSON to Excel export functionality.

Technologies Used: Node.js, Express, MongoDB, Handlebars Templates, Passport, HTML, CSS, jQuery, Git, AWS

Project 3: Snapcheck (Web Application)
Client: Snapcheck
Duration: October 2019 – 2021

Description: Snapcheck provides a paperless digital check technology for B2B electronic check payments, offering fast, secure, and cost-effective e-check payments for enterprises.

Role: Front-End Developer

Responsibilities:

- Implemented and secured the application using JWT authentication with HTML, Angular 8, JavaScript, and CSS, with a Java backend.
- Collaborated with other developers to ensure the website is both functional and visually appealing.
- Optimized the website for various devices.
- Planned the layout of the website.
- Coordinated with the onshore team and assisted team members in completing sprint tasks and delivering them successfully.

Technologies Used: Angular 8, JavaScript, Bootstrap, HTML5, CSS3, Git, SASS, Aws ,java(Backend)

Project 4: TaxSpanner (Web Application)
Client: TaxSpanner
Duration: February 2016 – July 2019

Description: TaxSpanner is a web application that handles the filing of individual Income Tax Returns (ITR), TDS, and other related services.

Role: Front-End Developer

Responsibilities:

- Developed a real-time dashboard with functionalities for managing ITR, ITD services, and TDS, among others.
- Gained an understanding of complex taxation and GST systems to implement accurate calculations within the application.
- Supported and optimized legacy code for scalability and efficiency; debugged defects in the legacy code and delivered patches.
- Designed the entire application following Angular Material design specifications with ES6.

Technologies Used: AngularJS, Angular Material, JavaScript, Bootstrap, HTML5, CSS3, Git, SASS, Gulp, Webpack

Additional Activities and Achievements

- **Training and Sessions:** Conduct regular training sessions on Angular and related topics, sharing knowledge and best practices with peers and junior developers.
- **Workshops:** Attended a comprehensive system design workshop, gaining insights into designing scalable and efficient systems.
- **Blogging:** Started writing a blog focusing on front-end development, sharing experiences, tutorials, and industry trends.
